EXECUTIVE SUMMARY

Senior UX / Product Designer with 9+ years in enterprise software — cybersecurity, project and workforce management, and employee-experience platforms, the kind with dense workflows and a lot going on under the surface. I work across the whole process, from research and information architecture to design systems and the UI that ships, and I stay close to product, engineering, and go-to-market so design shapes what gets built, not just how it looks. Design systems and accessibility (WCAG/ADA) are where I go deepest, and I'm at my best taking a genuinely complicated product and making it something people can move through without stopping to think.

CAREER HIGHLIGHTS

- Design owner for ThreatModeler NEXUS, an enterprise cybersecurity platform, from research through to the UI that ships.
- At Amdocs, designed Compass (project and workforce management) and an employee engagement platform used across the company.
- Built and scaled token-based design systems that cut UI inconsistencies by over 40% and sped up handoff to engineering.
- Accessibility (WCAG/ADA) built into my work from the start, not bolted on at the end.

CORE COMPETENCIES

Craft Interaction Design • Information Architecture • Prototyping • Experience Design • Design Systems
Research & Validation User Research • Usability Testing • Design Validation • Task Analysis • Heuristic Evaluation • Research Synthesis
Product & Strategy Product Discovery • Complex Workflow Design • Enterprise Workflow Optimization • Systems Thinking • Cross-functional Prioritization
Domain Depth Cybersecurity UX • Project & Workforce Management • Employee Experience • Enterprise SaaS
Accessibility WCAG • ADA • Inclusive Design • Compliance & Governance
Leadership Design Ownership • Mentoring • Stakeholder Alignment • Strategic Communication
Tooling Figma • Google Stitch (AI-assisted design) • Agile

EXPERIENCE

Senior UX Designer	Oct 2024 – Present
ThreatModeler <i>enterprise cybersecurity • threat-modeling platform</i>	Ahmedabad, India
• Own the design for ThreatModeler NEXUS, an enterprise cybersecurity threat-modeling platform, covering the full experience: research, information architecture, prototyping, and the UI that ships. • Built and scaled the token-based design system now adopted across the platform; it cut UI inconsistencies by over 40% and made handoff to engineering faster. • Led the onboarding redesign and defined the core surfaces — dashboard, threat modeling, and the risk register — so dense security workflows stay quick to use for the experts who work in them all day. • Balance what users need, what the business is after, and what engineering can realistically ship — and make the call when those pull in different directions. • Work with product managers, engineering leads, and the go-to-market team to decide which UX problems matter most across security, compliance, and enterprise needs, and which to tackle first. • Use AI-assisted tools like Google Stitch to get from concept to clickable prototype faster, which leaves more room to test ideas before anything gets built.	
UX/UI Specialist (promoted from Solution Designer)	Aug 2021 – Apr 2024
Amdocs <i>enterprise SaaS • workforce & employee platforms</i>	Pune, India

- Designed two enterprise platforms: Compass, for project and workforce management (allocations, leave and shifts, rostering, arrears, reporting), and an employee engagement platform for onboarding and everyday employee life (updates, events, mood check-ins, help desk).
- Turned dense operational workflows into screens managers and employees could get through without training or a manual.
- Established and scaled the design systems and component libraries behind these products, so large, multi-team platforms stayed consistent as they grew.
- Owned accessibility (WCAG/ADA) and partnered with product managers and engineers from discovery through delivery, across these and other internal products (including some telecom work).

Creative Designer (promoted from Designer)

May 2019 – Jul 2021

Cyber Infrastructure Pvt. Ltd. *B2B & B2C product studio*

Indore, India

- Led design for B2B and B2C products across several industries, from client discovery through to launch.
- Facilitated requirement-gathering workshops with clients, turning business goals into product directions the team could build.
- Simplified complex, multi-step flows into interfaces that made sense to first-time users, working closely with engineering on what was feasible.
- Built and maintained shared component libraries so quality and brand held up across several projects running at once.

UI/UX Designer

Oct 2017 – May 2019

Galaxy Weblinks

Indore, India

- Translated client business requirements into wireframes, prototypes, and UI, using research and competitor analysis to back up the design decisions.
- Worked closely with engineers and clients to shape designs into something practical to build, and set up reusable components to keep things consistent across projects.

Designer

Feb 2017 – Oct 2017

Opulence Infotech

Indore, India

- Designed web and mobile interfaces and supporting assets, contributing to wireframing, prototyping, and design reviews with front-end teams.
- Built my foundations here — moving work from rough concept to developer-ready design, and learning early on how a design holds up once it meets engineering.

LEADERSHIP & INFLUENCE

- Promoted twice as my scope grew (Designer → Creative Designer, then Solution Designer → UX/UI Specialist).
- Set the design standards other designers on the team now work to, and keep an eye on quality across their work.
- Mentor mostly through design critiques and reviews — walking through the decisions together rather than just handing over feedback.
- Share patterns and what I've learned so the team isn't solving the same problem twice, and act as the link between design, product, and engineering on what we're building and why.

PRODUCT DOMAINS

Cybersecurity · Project & Workforce Management · Employee Experience · Enterprise SaaS · Complex Workflow Products

CERTIFICATIONS & EDUCATION

Certification in Design Thinking & Innovation — IIT Delhi	2024
Foundations of User Experience (UX) Design — Google	2025
Bachelor of Science (B.Sc) — MP Bhoj University	2018

PORTFOLIO

Case studies covering enterprise SaaS, cybersecurity, design systems, and complex workflows — the problems I worked on, the decisions I made, and how the product changed. manoj-gehlot.vercel.app
