

# MANOJ GEHLOT

Senior UX / Product Designer · Enterprise SaaS · Cybersecurity · AI-Native Products · Design Systems

10 years making complex, high-stakes enterprise products simple — cybersecurity, workforce, and employee platforms. I own design end to end, from discovery and research through AI-native workflows to the design systems and UI that ship.

Ahmedabad, India · +91 9826889094 · manojgehlot294@gmail.com

## EXECUTIVE SUMMARY

I work end to end on the user experience of complex enterprise products — discovery and research, product and interaction design, AI-native workflows, design systems, and accessibility — staying close to product, engineering, customer success, and go-to-market so design shapes what gets built, not just how it looks. I use real user discovery and behavioral analytics to decide what matters and to measure whether it worked, and I'm at my best taking a genuinely complicated product and making it something people move through without stopping to think.

## CAREER HIGHLIGHTS

- **Design owner** for **ThreatModeler NEXUS** (enterprise cybersecurity); led an analytics-informed redesign — after the latest release, onboarding **+12%**, model creation **+25%**, AI-feature adoption **+34%**.
- **Designed AI-native workflows** for Security Architects — AI woven into their process, keeping humans in control of consequential security decisions.
- **Led NEXUS branding and GTM launch** — **150+ demo sessions pre-booked** by prospects.
- **Established token-based design systems** that cut UI inconsistencies **40%+**; drove accessibility to **WCAG A** (AA in progress).
- At Amdocs, designed a suite of employee-experience platforms — **WorkSync, EngageHub, Manager Hub, and Hylia** — used across **~25,000 employees**.

## CORE COMPETENCIES

**Craft** Interaction Design · Information Architecture · Prototyping · Web, iOS & Android · Design Systems · Accessibility (WCAG/ADA)

**Research & Analytics** User Research · Discovery · Usability Testing · Product Analytics (PostHog, Userpilot) · Funnels, Events & DAU/WAU/MAU

**AI-Native Design** Human-in-the-Loop AI · Agentic Experiences · AI Search · AI Content Generation

**Product & Strategy** Product Discovery · Complex Workflow Design · Conversion & Lead Generation · Product Launch & GTM · Systems Thinking

**Domain Depth** Cybersecurity UX · Project & Workforce Management · Employee Experience · Enterprise SaaS

**Leadership** Design Ownership · Team Direction & Reviews · Design Agile Sprints · Mentoring · Stakeholder Alignment

**Tools & Front-end** Figma · Figma Make · Miro · Balsamiq · Stitch · Lovable · Claude · ChatGPT · HTML · CSS3 · Bootstrap

## EXPERIENCE

### Senior UX Designer

ThreatModeler · enterprise cybersecurity · threat-modeling platform

Oct 2024 – Present

Ahmedabad, India

- Own end-to-end design for ThreatModeler NEXUS, an enterprise cybersecurity threat-modeling platform — discovery through shipped UI — across its core surfaces: onboarding, role-based access control (RBAC), the rules engine, configurations, diagramming, and reporting.
- Led an analytics-informed redesign of the first-time-user journey (onboarding → homepage → workspace → model creation) — clarifying what to do next, why an action matters, where users are in the workflow, and what changed while they were away — with friction identified through PostHog and Userpilot analytics (events, funnels, DAU/WAU/MAU), discovery, and usability testing with Customer Success, Product Managers, customers, and end users.
- After the latest release: onboarding completion **+12%**, model creation **+25%**, AI-feature adoption **+34%**, and overall progression through the redesigned journey **+28%**.
- Integrated AI into the Security Architect's existing workflow — AI search, AI-generated threats, components, and security requirements, agentic diagramming, a Secure Design Graph, and AI-assisted reporting — as native steps rather than buttons on the UI, reducing cognitive and operational load while human-in-the-loop review keeps users in control of consequential security decisions.
- Led branding alignment for NEXUS and partnered with go-to-market on a launch that pre-booked 150+ prospect demo sessions.
- Led the UX of migrating key features across the ThreatModeler and IriusRisk platforms after the two companies merged — aligning both with customer requirements so users of each could work in one experience.

- Shape feature scope for the Community Edition as well — what the community tier includes and what it leaves out — using product-metrics analysis to prioritize the biggest user problems and support conversion and lead generation.
- Established and scaled the token-based design system adopted across the platform — 40%+ fewer UI inconsistencies and faster handoff to engineering.
- Drove the accessibility initiative that brought NEXUS into Web Content Accessibility Guidelines (WCAG) A compliance, with AA in progress — resolving color-contrast issues and defining keyboard-navigation flows where the product had none.

### UX/UI Specialist (promoted from Solution Designer)

Aug 2021 – Apr 2024

Amdocs · enterprise SaaS · workforce & employee platforms

Pune, India

- Led design across a suite of enterprise employee-experience and workforce platforms: WorkSync (project and workforce management — allocations, leave, arrears, reporting), EngageHub (employee engagement — onboarding, events, mood check-ins, help desk), Manager Hub (out-of-office delegation, task hand-off across owners and time horizons, and tracking), and Hylia (roster automation — shifts, breaks, shift-exchange, and rostering rules).
- Simplified dense operational workflows into clear decisions — for example, a global leave portal surfacing unused, available, and payout balances with multi-year transactions so managers and employees could act at a glance.
- Designed org-wide employee sentiment surveys and their UX copy, and a manager nomination-and-awards program with HRBP teams — used across ~25,000 employees.
- Established and scaled the design systems, component libraries, and brand guidelines across these products; reviewed and guided junior designers, ran design Agile sprints (up to six-month cycles), owned accessibility (WCAG/ADA), and partnered with product and engineering from discovery through delivery.

### Creative Designer (promoted from Designer)

May 2019 – Jul 2021

Cyber Infrastructure Pvt. Ltd. · B2B & B2C product studio

Indore, India

- Led design for global B2B and B2C clients across industries — healthcare, automotive, education, nonprofit, and social media.
- Ran client interviews and requirement-gathering workshops, turning business goals into product direction the team could build.
- Simplified complex, multi-step flows across web and mobile (iOS and Android) into interfaces that made sense to first-time users, working closely with engineering on feasibility.
- Built and maintained shared component libraries so quality and brand held up across several projects running at once.

### UI/UX Designer

Oct 2017 – May 2019

Galaxy Weblinks

Indore, India

- Designed web and mobile (iOS and Android) UI for clients including Netgear, and built responsive CMS interfaces in HTML/CSS3/Bootstrap, partnering with QA to resolve cross-device and UI issues.
- Rebuilt an invoice-print layout that had defeated earlier developers — a custom HTML/CSS solution that passed QA and printed reliably from PDF generation.

### Designer

Feb 2017 – Oct 2017

Opulence Infotech

Indore, India

- Supported senior designers on client work with hands-on front-end (HTML, CSS, Bootstrap) and web/mobile UI — building my foundations from concept to developer-ready design.

## LEADERSHIP & INFLUENCE

- Promoted twice as my scope grew (Designer → Creative Designer, then Solution Designer → UX/UI Specialist).
- Set the design standards other designers now work to — assigning and reviewing their work, prioritizing, and mentoring through critiques rather than just handing over feedback.
- Act as the link between design, product, engineering, and customer success, sharing patterns so the team isn't solving the same problem twice.

## CERTIFICATIONS & EDUCATION

Certification in Design Thinking & Innovation — IIT Delhi

2024

Bachelor of Science (B.Sc) — MP Bhoj University

2018

## PORTFOLIO

Case studies covering enterprise SaaS, cybersecurity, AI-native features, design systems, and complex workflows — the problems I worked on, the decisions I made, and how the product changed. [View portfolio](#)
